

Uday Kumar

Principal Member of Technical Staff
Oracle India Private Limited, India

+91-9096440767 | uday06542@gmail.com | LinkedIn: <https://www.linkedin.com/in/uday/>

Professional Summary

Engineering leader with 14 years of experience building and operating scalable, fault-tolerant distributed systems using Java and Spring Boot. Led system ownership and architecture design initiatives, guiding engineering teams from incubation to production and delivering 5+ high-performance software solutions. Demonstrates direct, hands-on technical expertise while leading execution, mentoring teams, and driving data-informed decision making.

Skills

Engineering / Technical Skills: Java (8 | 17+) | Spring Boot | Spring MVC | Hibernate | REST APIs | microservices | Multithreading and Concurrency | Junit | Mockito | Distributed Systems | Microservices | Event-Driven Systems | Fault Tolerance | HLD/LLD | Oracle DB | PostgreSQL. AWS | Oracle Cloud Infrastructure (OCI) | NLP | Word2Vec | RAG | Oracle Generative AI | Chatbot Systems | Ethics and AI Governance | CI/CD | Monitoring | Automation

Leadership Skills: Team Leadership | Hiring & Onboarding | Mentoring | Code Reviews | Technical Strategy | Stakeholder Management

Professional Experience

Oracle India Private Limited

July 2018 – Present

Principal Member of Technical Staff

- Led a team of 6 engineers including direct reports and cross-functional contributors, driving delivery of multiple backend systems.
- Contributed in Technical hiring across the line of business, hiring 40+ engineers through lateral and campus recruitment (including IITs), strengthening team capability and delivery capacity.
- Owned end-to-end delivery of enterprise SaaS platforms, driving architecture, development and validation, and production stability of distributed systems.
- Led engineering efforts across multiple initiatives, aligning technical execution with product roadmap and business priorities.
- Defined and enforced system architecture (HLD/LLD), improving scalability, fault tolerance, and maintainability of backend services.
- Mentored engineers through structured code reviews and design discussions, improving engineering quality and consistency.
- Acted as system owner in production, driving incident resolution, performance tuning, and reliability improvements.
- Designed data pipelines and monitoring frameworks to support high-throughput analytics and ensure operational visibility.
- Partnered with cross-functional stakeholders to drive consensus on technical decisions and delivery timelines.
- Led AI governance efforts, ensuring compliance, data security, and responsible integration of AI capabilities.

EdgeVerve Systems Limited (Infosys Group)

June 2015 – July 2018

Member of Technical Staff – R&D (CTO), Product Incubation

- Designed and delivered real-time fraud detection system processing up to 1.2 million transactions per second.
- Owned architecture decisions for high-throughput distributed systems using event-driven design and Kafka.
- Developed cloud-based solutions on AWS integrating machine learning components using Python.
- Collaborated with CTO office and business stakeholders to convert product ideas into scalable production systems.
- Mentored engineers and supported onboarding of new team members in R&D projects.
- Improved operational efficiency by 60% through scalable onboarding platform supporting 8000+ users.

Infosys Limited

Feb 2012 – June 2015

Senior Systems Engineer

- Developed backend systems for enterprise financial platforms using Java and Spring.
- Delivered scalable services aligned with architecture and performance requirements.
- Collaborated with cross-functional teams to deliver reliable production systems.

Key Projects

Fusion Data Intelligence (FDI)

- Delivered enterprise SaaS analytics platform with ETL data pipelines and monitoring systems.
- Led architecture, risk management, and AI compliance initiatives.

CXO Platform

- Designed backend architecture for executive decision systems with real-time data processing.
- Enabled event-driven workflows to support high availability and responsiveness.

Data Harmonization Platform

- Built distributed system processing 1.2M multi-lingual tokens per second using Kafka, Java, and Cassandra.
- Applied NLP techniques (Word2Vec) for AI-driven data harmonization.

Onboarding Platform and Product Incubation Portal

- Developed onboarding system supporting 8000+ users, improving operational efficiency by 60%.
- Designed secure and highly available architecture with NLP-based chatbot integration.
- Built greenfield platform for project and user lifecycle management within CTO organization.

Education

Bachelor of Engineering (Electronics & Telecommunication)

Nagpur University (RTMNU), India

Aug 2007 – June 2011

Certifications

- Software Product Management – University of Alberta (Coursera)
- Software Processes and Agile Practices – University of Alberta (Coursera)
- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional
- Oracle AI Vector Search Certified Professional certification
