

Uday Kumar

Principal Member of Technical Staff | Oracle India Private Limited, India
+91-9096440767 | uday06542@gmail.com | LinkedIn: linkedin.com/in/uday

Professional Summary

Full-Stack Engineering Leader with 14+ years of experience architecting high-scale enterprise SaaS platforms, specializing in Java/Spring Boot distributed microservices and modern React/TypeScript frontend ecosystems. Expertise in scalable microservices, solution architecture, system design, high-throughput data processing, cloud platforms, concurrency, and production reliability, high-performance backend platforms integrated with responsive user interfaces

Led engineering initiatives from product incubation through production deployment, including architecture definition, technical strategy, hiring, mentoring, and operational ownership. Experienced in building fault-tolerant systems, real-time processing platforms, AI-enabled solutions, and large-scale analytics pipelines.

Skills

Engineering / Technical Skills: Java (8, 17+) | Spring Boot | Spring MVC | Hibernate | REST APIs | microservices | Multithreading and Concurrency | Junit | Mockito | Distributed Systems | Microservices | Event-Driven Systems | Fault Tolerance | HLD/LLD | Oracle DB | PostgreSQL | AWS | Azure | Oracle Cloud Infrastructure (OCI) | NLP | Word2Vec | RAG | Oracle Generative AI | Chatbot Systems | Ethics and AI Governance | CI/CD | Monitoring | Automation | JSP | JavaScript | React js | TypeScript | JavaScript (ES6+) | Redux Toolkit | HTML5 and CSS3

Leadership Skills: Team Leadership | Hiring & Onboarding | Mentoring | Code Reviews | Technical Strategy | Stakeholder Management

Professional Experience

Oracle India Private Limited

July 2018 – Present

Principal Member of Technical Staff

- Led architecture, development, and production ownership of enterprise SaaS and distributed backend platforms using Java and Spring Boot, OCI and Architectural frameworks.
- Architected and led the full-stack development of a high-performance React/TypeScript and Redux console, seamlessly integrated with Spring Boot microservices to handle configuration and real-time monitoring for 10k+ tenants.
- Managed and mentored a team of 6 engineers across backend development, architecture reviews, and production delivery initiatives.
- Drove end-to-end system design including HLD/LLD, scalability planning, fault tolerance, reliability engineering, and operational readiness.
- Managed multiple engineering initiatives aligned with product roadmap priorities and enterprise-scale platform requirements.
- Designed high-throughput ETL and monitoring pipelines to improve analytics processing and operational observability to serve more than 10k tenants.
- Acted as primary system owner for production platforms, leading incident resolution, performance optimization, and reliability improvements.
- Established engineering quality practices through structured code reviews, technical mentoring, and design governance.
- Collaborated with product managers, architects, and cross-functional stakeholders to drive technical decisions and delivery execution.
- Led AI governance and compliance initiatives focused on secure and responsible adoption of AI capabilities within enterprise platforms mitigating risks by 40%.

Key Initiatives

Fusion Data Intelligence (FDI)

- Delivered enterprise analytics SaaS solution with scalable ETL data pipelines and monitoring systems.
- Delivered intuitive web interface for data configuration and ETL Job management console using JavaScript, React JS and OJet.
- Led architectural governance, risk management, and AI compliance initiatives across platform.

CXO Platform

- Designed backend architecture for executive decision systems with real-time processing and event-driven workflows, improving platform responsiveness and availability.

EdgeVerve Systems Limited (Infosys Group)

June 2015 – July 2018

Member of Technical Staff – R&D (CTO), Product Incubation

- Designed a highly available, full-stack product incubation portal processing up to 1.2M transactions per second; authored high-throughput Spring backend APIs coupled with modular, reusable React data-grid components.
- Designed distributed event-driven systems using Kafka for high-throughput and low-latency processing workloads.
- Developed cloud-native solutions on AWS integrating machine learning workflows and Python-based components.
- Partnered with CTO organization and business stakeholders to transform product concepts into scalable production-ready platforms.
- Mentored engineers and supported POC activities within R&D and incubation programs.
- Improved operational efficiency by 60% through development of a scalable onboarding platform supporting 8,000+ users.

Key Initiatives

Data Harmonization Platform

- Built distributed multilingual processing platform handling 1.2 million tokens per second using Java, Kafka, and Cassandra.
- Applied NLP techniques including Word2Vec for AI-driven data harmonization workflows.

Onboarding Platform & Product Incubation Portal

- Developed a lifecycle management and onboarding platform that supports 8,000+ enterprise users.
- Designed secure and highly available backend architecture with NLP-based chatbot integration.
- Built greenfield product incubation portal for project and user lifecycle management.

Infosys Limited

Feb 2012 – June 2015

Senior Systems Engineer

- Developed backend services and enterprise financial platform components using Java and Spring technologies.
- Implemented and integrated a user interface using Javascript and JSP for displaying Trade data.
- Delivered scalable and reliable services aligned with enterprise architecture and performance requirements.
- Collaborated with distributed engineering teams to support development and production delivery activities.

Education

Bachelor of Engineering (Electronics & Telecommunication)

Nagpur University (RTMNU), India

Aug 2007 - June 2011
